

Aluminum Alloy Cylinder Head with Cooling Fins

This cylinder head is precision-engineered for optimal engine performance. Its robust construction includes cooling fins for efficient heat dissipation.

Product Overview

Precision-Engineered Performance

The LY250 cylinder head is a precision-engineered component designed for optimal engine performance and reliability. Featuring a robust aluminum alloy construction with integrated cooling fins, it ensures efficient heat dissipation during operation. The design incorporates optimized intake and exhaust ports, valve seats, and a combustion chamber specifically shaped to maximize combustion efficiency.

Technical Specifications

Design Benefits

- Enhanced heat dissipation via cooling fins
- Precise fit and sealing for engine reliability
- Optimized intake and exhaust port geometry
- Engineered for combustion efficiency

Material	Aluminum Alloy
Key Features	Cooling Fins, Precision Machined, Optimized Combustion Chamber, High-Efficiency Ports
