

Aluminum Cable Support Brackets

Aluminum cable support brackets provide secure and reliable cable management. Their robust construction and multiple mounting points ensure enhanced stability for various industrial and commercial applications.

Product Overview

Professional Bus-Bar and Cable Support Solutions

These aluminum cable support brackets are engineered for secure and reliable cable management in demanding substation environments. Designed to fix or hang bus-bars on insulators, the system accommodates various bus types, including rectangular channel and tube bus configurations. The robust construction ensures long-term stability and protection for critical electrical infrastructure in industrial and commercial applications.

Technical Specifications

Supported Bus Types

- Rectangular Channel
- Tube Bus
- Cable Supports

Body Material	Aluminum Alloy
Hardware Material	Hot-DIP Galvanized Steel

Application Details

Key Features

Robust Construction • Multiple Mounting Points • Enhanced Stability

Primary Application	Substation Infrastructure, Industrial Cable Management, Commercial Electrical Systems
