Product Overview

Integrated Filling and Sealing Solution

The Aluminum Can Filling and Sealing Machine is an advanced, integrated production line designed for high-speed, automated beverage packaging. Constructed with durable stainless steel, this system ensures precise filling and high-quality sealing to maintain product integrity. It features sophisticated controls, including PLC and human-machine interface touch screens, making it a reliable choice for various liquid applications.

Technical Specifications

Control Technology

- Human-machine interface touch screen
- PLC computer control
- Inverter control

Construction Material

Stainless Steel 304, Stainless Steel 316

Application

Suitable Products

Carbonated Drinks • Tea Drinks • Juice Drinks • Functional Drinks • Health Drinks • Coarse Grain Drinks • Probiotic Drinks • Alcohol

Performance

Key Performance Indicators

2 in 1

Process Integration

Operational Advantages

- Accurate filling precision
- High-speed production capacity
- Stable production output
- High-quality sealing
- World-famous electrical and pneumatic components
