

Aluminum Foil Tape for HVAC and Insulation

This aluminum foil tape is designed for HVAC systems, insulation, sealing, and patching. It offers excellent adhesion, thermal conductivity, and resistance to moisture, chemicals, and extreme temperatures.

ADDITIONAL IMAGES

Overview

High-Performance HVAC & Insulation Sealing

This high-quality aluminum foil tape is engineered for demanding applications including HVAC systems, insulation sealing, and surface protection. It offers excellent thermal conductivity and resistance to moisture, chemicals, and extreme temperatures, ensuring long-lasting performance in industrial environments. Designed for creating airtight seals and reflecting heat, it is an essential component for refrigeration equipment and general maintenance.

Technical Specifications

Foil Thickness Options

- Aluminum foil tape without backing: 0.025mm
- Aluminum foil tape with backing: 0.025mm
- Aluminum foil tape coating: 0.02 + 0.02mm

Specialty Tape Variants

Tape Type	Thickness/Feature
Blue PET Fixing Tape	Standard
Sponge Tape	6mm Thickness

Performance Features

Key Attributes	Thermal Conductivity, Moisture Resistant, Chemical Resistant, Extreme Temperature Resistance, Airtight Sealing
----------------	--

Applications

Primary Applications

HVAC Systems • Insulation • Sealing & Patching • Heat Reflection • Refrigeration Equipment

Manufacturing Quality

Precision Manufacturing

Our tapes are processed using high-precision slitting machinery that ensures consistent winding and dimensional accuracy. This automated production process guarantees that every roll meets the strict quality requirements needed for industrial refrigeration accessories and flexible material conversion.
