

Aluminum Heatsink with Fins

Aluminum heatsinks with multiple fins provide efficient heat dissipation. These heatsinks are designed for cooling electronic components in computers, amplifiers, and other devices.

Product Overview

High-Efficiency Thermal Management

This aluminum heatsink is engineered with a multi-fin design to maximize surface area, ensuring superior heat dissipation for critical electronic components. It features pre-drilled mounting holes to facilitate quick and secure installation in various hardware configurations. Designed for versatility, this solution provides reliable thermal management for CPUs, GPUs, power amplifiers, and other heat-sensitive electronic devices.

Technical Specifications

Material	Aluminum
Design Features	Multi-fin design, Pre-drilled mounting holes, High surface area

Applications

Compatible Components

- CPUs
- GPUs
- Power Amplifiers
- General Electronic Devices

Usage Sectors

Computing • Audio Equipment • Industrial Electronics
