

Aluminum Mast Aerial Work Platform

The AWP series mast aerial work platforms offer high efficiency and easy operation. They are widely used in power, petrochemical, warehouse, manufacturing, installation, and maintenance applications.

Product Overview

Versatile Aluminum Aerial Work Platform

The Aluminum Mast Aerial Work Platform series is engineered for high-efficiency maintenance and installation tasks in industrial environments. Constructed from lightweight yet durable aluminum, these platforms offer exceptional stability while remaining easy to maneuver through confined spaces. Designed with user safety in mind, the series features smooth vertical lifting and intuitive controls, making it an ideal solution for warehouse stock picking and overhead repairs.

Key Performance Metrics

Performance Highlights

11 m

Max Working Height

Design & Construction

Design Features

- Compact footprint for narrow aisles
- Stable base construction
- Smooth vertical lift mechanism
- User-friendly control interface

Primary Material

Lightweight Aluminum

Applications

Recommended Applications

Overhead Repairs • Installation Work • Stock Picking • Warehouse Maintenance • Industrial Cleaning

Safety & Operation

Safety Focus

Enhanced stability and maneuverability for operation in confined industrial spaces.
