

Aluminum Shell Three-Phase Asynchronous Motor

This three-phase asynchronous motor features a durable aluminum shell. It is designed for industrial applications requiring reliable and consistent performance.

Product Overview

High-Efficiency Industrial Motor

This three-phase asynchronous motor is engineered with a durable aluminum shell, providing excellent thermal dissipation and robust construction for long-lasting operation. Designed for demanding industrial environments, it ensures reliable and consistent performance across a wide range of machinery and equipment. Its lightweight yet sturdy design makes it a versatile solution for various power transmission needs.

Technical Specifications

Series	YE2 Series
Motor Type	Three-Phase Asynchronous
Housing Material	Aluminum
