

Aluminum Support Shaft

This precision-engineered support shaft is crafted from high-grade aluminum. Its lightweight design and corrosion resistance make it suitable for demanding applications.

Product Overview

High-Performance Aluminum Support Shaft

This precision-engineered aluminum support shaft is designed to provide robust structural integrity and reliability for industrial and automotive applications. Manufactured from AC9B-T6 aluminum, it offers an optimal balance of lightweight construction and excellent corrosion resistance. Each component is meticulously crafted to ensure high performance and seamless integration into mechanical systems.

Technical Specifications

Material Composition	AC9B-T6 Aluminum
Dimensions	120 x 95 mm
Weight	389 g
Model Identifier	8AT032303025

Manufacturing Services

Custom Production

- Custom samples
- Drawing-based manufacturing
- Tailored aluminum solutions
