

Aluminum Wheel Rim Edge Turning Machine

This machine is designed for the accurate and efficient turning of aluminum rim wheel edges. It features a robust construction and incorporates advanced automation capabilities, including programmable logic control (PLC) for precise control over the turning process.

Overview

Precision Aluminum Rim Turning

The Aluminum Wheel Rim Edge Turning Machine is a precision-engineered solution designed for the accurate and efficient finishing of aluminum wheel rim edges. Built for high-volume production environments, it combines robust construction with advanced automation to ensure stability, durability, and consistent results. Its user-friendly interface and integrated safety systems make it a reliable asset for modern manufacturing facilities.

Technical Specifications

Control System	Programmable Logic Control (PLC)
Key Features	High-Speed Spindle, Precision Cutting, Automated Operation, Robust Construction

Safety & Maintenance

Safety Mechanisms

- Protective Enclosure
- Emergency Stop Mechanisms

Operational Capabilities

Production Environment

High-Volume Production
