

AM FM Radio Antenna Amplifier

This amplifier is designed for amplifying AM, FM, and digital radio signals. Its compact design makes it suitable for applications requiring enhanced radio frequency reception.

Product Overview

High-Performance Signal Enhancement

This AM/FM radio antenna amplifier is engineered to provide superior signal reception for both analog and digital terrestrial radio systems. Utilizing advanced SMD circuit technology, the unit features a built-in high-gain, low-noise booster to significantly improve audio clarity. Its shielded design ensures minimal interference, making it a reliable solution for demanding radio frequency applications.

Technical Specifications

Supported Signals	AM, FM, DAB
Circuit Technology	SMD (Surface Mount Device)
Shielding	Yes

Key Features

Performance Highlights

1 Low

Noise Level

1 High

Gain
