

Amateur Refracting Telescope, 50mm Aperture, 600mm Focal Length

This refracting telescope is designed for amateur astronomy. It features a 600mm focal length and a 50mm aperture, providing a balance between magnification and light-gathering capability.

Overview

Amateur Refracting Telescope

This 50mm aperture refracting telescope is an ideal entry-level instrument for amateur astronomy enthusiasts. With a 600mm focal length, it provides a clear and stable view of the Moon, planets, and bright deep-sky objects. The included altazimuth mount and essential accessories make it a user-friendly choice for beginners looking to explore the night sky.

Optical Performance

Aperture	50 mm
Focal Length	600 mm
Finderscope	5X24
Corner Lens	90°

Accessories

Included Eyepieces

- H8 (24.5mm)
- H20 (24.5mm)

Mount & Build

Mount Type	TP8 Aluminum Altazimuth
