

Amplified Indoor HDTV Antenna

This amplified indoor HDTV antenna is designed to receive over-the-air digital TV signals. The built-in amplifier enhances weak signals, providing a clearer picture and more channels.

Product Overview

High-Performance Indoor HDTV Reception

The HDA-035B1 is an amplified indoor antenna engineered to deliver crystal-clear digital television signals. Featuring a built-in low-noise amplifier, this unit enhances signal reception capabilities for both VHF and UHF frequencies, ensuring high-quality picture and sound. Designed for reliability, it includes integrated 4G LTE interference prevention to maintain signal integrity in modern environments.

Technical Specifications

Signal Compatibility	VHF, UHF
Amplifier Features	Built-in low noise amplifier
Interference Protection	4G LTE circuit

Certifications

Safety and Compliance
CE Approved

Key Benefits

Advantages

- Reduces monthly television costs
- Delivers crystal clear picture quality
- Provides clear audio performance
- Enhances signal catching ability
