

Angle Valve for Fluid and Gas Control

This angle valve controls the flow of fluids or gases in pipelines and systems. Its robust construction includes multiple ports and mounting flanges for secure installation in complex pneumatic or hydraulic setups.

Product Overview

Industrial Flow Control

This angle valve is engineered for precise management of fluids and gases within complex pneumatic or hydraulic systems. Featuring a robust metallic construction, it offers the durability required for demanding industrial environments. The design includes integrated mounting flanges and threaded ports to ensure secure installation and reliable performance in pipeline applications.

Technical Specifications

Body Material	Metallic (Aluminum or Steel)
Primary Applications	Pneumatic Systems, Hydraulic Systems, Fluid Control, Gas Management

Design Features

Connection Type

- Threaded ports
- Mounting flanges

Operational Capability

Flow Direction Control • Volume Regulation • High Pressure Resistance
