

Angle Valve

This angle valve is designed for efficient fluid control. It ensures reliable performance and precise regulation of flow within a system.

Product Overview

Heavy-Duty Dewatering Solution

This heavy-duty submersible pump is engineered for demanding dewatering applications in challenging environments. Built with robust construction and a high-efficiency motor, it ensures reliable performance for industrial sites, mining operations, and construction projects. The unit includes advanced safety features like thermal overload protection and a float switch for automatic operation.

Technical Specifications

Model	SL-1.5
Key Features	Submersible, Heavy-duty, Automatic Float Switch, Thermal Overload Protection

Applications

Suitable Applications

- Construction site dewatering
- Mining operations
- Industrial water removal
