

Angled Male Threaded Pipe Fitting

This angled pipe fitting features male threads on both ends. It is constructed from a metallic material and designed for plumbing applications where pipes need to be connected at an angle.

Product Overview

Angled Male Threaded Pipe Fitting

This angled pipe fitting is engineered for secure and reliable connections in plumbing and industrial piping systems. Featuring male threads on both ends, it allows for seamless directional changes in fluid or gas transport lines. Constructed from durable metallic material, this component is designed to withstand standard operating pressures and ensure long-term integrity in various plumbing applications.

Technical Specifications

Material

Metallic

Connection Type

Male Threaded

Fitting Angle

90 degrees

Suitable Applications

Plumbing, Industrial Piping, Fluid Transport
