

Angular Contact Ball Bearing

These angular contact bearings are available in single and double configurations. They accommodate light to heavy loads at low or high speeds.

Product Overview

Angular Contact Ball Bearing Overview

These angular contact ball bearings are engineered for versatility, accommodating both single and double-row configurations. They are designed to handle a wide range of operational demands, from light loads to heavy-duty applications, and are suitable for both low-speed and high-speed environments. The product is highly adaptable, with options for back-to-back, face-to-face, and universal matching to meet precise customer requirements.

Technical Configuration

Operational Suitability

- Light to heavy loads
- Low-speed operations
- High-speed operations
- Machine tools
- Pumps
- High-speed rotating equipment

Available Configurations

Single Row, Double Row, Back to Back, Face to Face, Universal Matching
