

Angular Contact Ball Bearing

These high-precision angular contact ball bearings are suitable for demanding applications requiring high radial and axial load carrying capacity. Engineered to minimize friction and provide smooth operation at high speeds, they feature optimized internal geometry and premium-grade steel construction for long service life and reliable performance.

Product Overview

Angular Contact Ball Bearing

These high-precision angular contact ball bearings are designed for demanding applications requiring high radial and axial load-carrying capacity. Engineered to minimize friction and provide smooth operation at high speeds, they feature optimized internal geometry for reliable performance. Constructed from premium-grade steel, these bearings are suitable for use in machine tools, pumps, and other industrial equipment.

Technical Specifications

Material	GCr15, GCr15SiMn
----------	------------------

Quality & Compliance

Certifications
ISO 9001:2000

Service & Value

Service Highlights

- Competitive pricing
- Excellent quality standards
- Best-in-class service and packaging
