

Anodized Aluminum Bicycle Handlebar

This high-performance bicycle handlebar is made from anodized aluminum. Its design provides optimal ergonomics and control for mountain biking and demanding cycling disciplines.

Product Overview

High-Performance Aluminum Handlebar

This high-performance bicycle handlebar is engineered from durable anodized aluminum, designed to withstand the demands of mountain biking and rigorous cycling disciplines. Its geometry is optimized to provide superior steering responsiveness and rider comfort, making it an ideal choice for both competitive and recreational cyclists. The vibrant anodized finish not only adds a sleek aesthetic but also provides essential resistance to corrosion for long-lasting durability.

Technical Specifications

Material	Anodized Aluminum
Width	800 mm
Recommended Use	Mountain Biking, Competitive Cycling, Recreational Cycling

Design Features

Design Highlights

- Central clamping area for secure stem attachment
- Tapered ends for ergonomic grip placement
- Corrosion-resistant anodized finish
- Optimized geometry for steering responsiveness
