

Anodized Aluminum Extrusion Profile with C-Channels

This black anodized aluminum extrusion profile is designed for structural support. It features integrated C-channels and longitudinal grooves for versatile mounting options.

Product Overview

Structural Aluminum Extrusion

This high-quality aluminum extrusion profile is engineered for robust structural applications. Featuring a sleek black anodized finish, it provides both aesthetic appeal and enhanced durability against environmental wear. The design incorporates integrated C-channels and longitudinal mounting grooves, offering versatile attachment options for modular assembly and industrial framework construction.

Technical Specifications

Finish	Black Anodized
Material	Aluminum

Design Features

Primary Use

Structural Framework • Modular Assembly • Industrial Mounting

Channel Configuration	C-Channels, Longitudinal Grooves
