

ANSI B16.5 Forged Flange

This forged flange adheres to ANSI B16.5 standards. It is designed to provide a secure and leak-proof connection in hydraulic systems, pipelines, and structural components.

Product Overview

ANSI B16.5 Forged Flange Capabilities

This forged flange is engineered to comply with ANSI B16.5 standards, providing a secure and reliable connection for demanding industrial applications. Designed for high-performance environments, it supports seamless rolled ring construction with significant dimensional flexibility. Its robust build makes it an ideal component for hydraulic systems, pipelines, and heavy-duty structural machinery.

Dimensional Specifications

Outer Diameter Range

700 mm

Min Outer Diameter

9000 mm

Max Outer Diameter

Maximum Thickness	800 mm
Maximum Height	1500 mm

Performance Capabilities

Maximum Weight	40 tons
