

API Standard Globe Valve

This American standard globe valve features a disc that rotates around the centerline of the body to open and close. It is designed to regulate flow in industrial applications.

Product Overview

API Standard Globe Valve

The API Standard Globe Valve is engineered for precise flow regulation and reliable shutoff in demanding industrial applications. Featuring a distinctive globe-shaped body and an internal disc that moves perpendicularly to the flow path, this valve excels in throttling services. Its robust construction and flanged connections ensure secure, leak-proof installation in piping systems designed to withstand high pressures and temperatures.

Technical Specifications
