

Apparel Machinery Fluid Reservoir

This plastic reservoir is designed for fluid dispensing in apparel machinery. It allows monitoring of fluid levels via a transparent section and controlled release through a dispensing nozzle.

Product Overview

Industrial Fluid Reservoir

This specialized fluid reservoir is designed for integration into apparel and textile manufacturing machinery. Engineered for reliability, it features a semi-transparent construction that allows operators to monitor fluid levels at a glance, ensuring optimal performance and maintenance. Its robust design is ideal for housing lubricants, coolants, or cleaning solutions necessary for high-speed industrial sewing and fabric processing.

Technical Specifications

Material Composition	High-durability industrial grade plastic
Visibility	Yes
Design Features	Transparent lower section, Controlled dispensing valve, Integrated reservoir design

Application

Compatible Fluids

- Machinery Lubricants
- Industrial Coolants
- Cleaning Solutions
