

Apparel/Textile Machinery Acoustic Device

This machinery part is an acoustic device designed for apparel and textile machinery. It features a circular diaphragm and a durable, weather-resistant housing suitable for industrial settings.

Product Overview

Industrial Acoustic Performance

The SL4000 is a specialized acoustic device engineered for high-performance applications in textile and apparel machinery environments. Its robust, weather-resistant construction ensures durability, making it an ideal choice for monitoring or sound output in demanding industrial settings. This component integrates seamlessly into machinery that requires reliable acoustic feedback or auditory analysis during the manufacturing process.

Technical Details

Design Specifications

- Circular diaphragm
- Robust industrial enclosure

Model Identification	SL4000
Construction	Weather-resistant, Industrial Grade, Durable Housing
