

Arc Welding Machine BX1 Series

The BX1 series welding machine is a reliable arc welding power source suitable for various welding tasks. It features adjustable current output for optimal welding with different electrodes and materials.

Overview

Reliable Arc Welding Power Source

The BX1 series welding machine is a robust power source engineered for versatility and reliability across various welding applications. Featuring adjustable current output, it ensures optimal performance when working with different electrode sizes and materials, such as mild steel and stainless steel. Its compact and sturdy construction makes it a dependable choice for both workshop environments and on-site operations.

Technical Features

Suitable Materials

- Mild Steel
- Stainless Steel
- Ferrous Metals

Key Performance Metrics

130 A

Min Current (130F)

250 A

Max Current (250F)

Safety Systems

Thermal Overload Protection
