

ARC250 Welding Machine

The ARC250 is a versatile welding machine designed for various welding applications. Adjustable settings allow for precise control over welding parameters, ensuring high-quality welds.

Overview

Professional Performance

The ARC250 is a versatile welding machine engineered for precision and reliability in demanding industrial environments. Featuring an advanced inverter design, it supports both AC and DC welding modes for maximum flexibility. The unit includes a clear digital display for accurate monitoring of current and voltage, ensuring high-quality weld consistency for a wide range of tasks.

Technical Specifications

Welding Technology	Inverter AC/DC
Model Identifier	ARC-250

Key Features

Interface

Digital Display • Adjustable Settings

Safety Protections

Overload Protection, Overheating Protection
