

Articulating Coolant Tube

Articulating coolant tubes precisely direct coolant or lubricant in machining applications. Their interconnected ball-and-socket joints enable easy positioning and adjustment of the coolant stream.

Product Overview

Precision Cooling Solutions

This articulating coolant tube is designed for machine tools, hydraulic machinery, and water cooling systems. Featuring an adjustable length and interchangeable nozzle diameters, it allows for precise direction of coolant or lubricant flow. The modular ball-and-socket design ensures durability and flexibility, making it an essential component for improving machining efficiency and extending tool life.

Technical Specifications

Key Features

- Adjustable length
- Interchangeable nozzle diameters
- Flexible positioning
- Modular ball-and-socket joints

Material Characteristics

Chemical Resistant • Heat Resistant • Durable Plastic

Applicable Systems

Machine Tools, Hydraulic Machinery, Water Cooling Systems

Connection Type

Threaded ends
