

Asphalt Batch Mix Plant

This stationary plant precisely weighs aggregate and batches materials. It is widely applied and easily operated for asphalt production.

Product Overview

BAP Series Asphalt Batching Plant

The BAP Series is a stationary batch mix asphalt plant engineered for the production of high-quality hot mix asphalt (HMA) and stone macadam asphalt (SMA). Designed for efficiency and reliability, this system features precise weighing and batching capabilities to ensure consistent asphalt concrete quality. It is an ideal solution for large-scale road construction and rehabilitation projects requiring high-grade pavement materials.

Technical Specifications

Plant Configuration	Stationary
Mixing Process	Batch Mix
Key Features	Precise Weighing, Advanced Control System, Modular Design, Consistent Output

Key Components

Integrated Components

- Aggregate Feeders
- Drying Drum
- Mixing Tower
- Dust Collection System
- Asphalt Storage Tanks
