

Asphalt Coated Steel Pipe for Corrosion Protection

This asphalt coated steel pipe is designed for underground and submerged applications requiring robust corrosion and abrasion resistance. Its multi-layer construction features a steel core coated with asphalt, making it suitable for water pipelines, oil and gas transmission, and industrial effluent systems.

Product Overview

High-Performance Anticorrosion Solution

This asphalt-coated steel pipe is engineered for demanding underground and submerged applications, offering robust resistance to corrosion and abrasion. Featuring a multi-layer construction with a durable steel core, it provides superior protection against harsh environmental conditions and chemical exposure. It is an ideal choice for water pipelines, oil and gas transmission, and industrial effluent systems, ensuring long-term operational reliability and reduced maintenance costs.

Technical Specifications

Nominal Diameter	1700 mm
Wall Thickness	20 mm
Pipe Angle	90 degrees

Applications

Primary Applications	Water Pipelines, Oil & Gas Transmission, Industrial Effluent Systems, Underground Infrastructure, Submerged Installations
----------------------	---

Performance Features

Key Protection Benefits

- Superior corrosion resistance
- High abrasion resistance
- Multi-layer protective coating
- Long-term structural reliability
- Reduced maintenance requirements
