

Asphalt Road Paver RP452L

This self-propelled road paving machine is designed for asphalt laying and road construction projects. It utilizes a hopper for material loading, a distribution system for even spreading, and a screed for smoothing and compacting asphalt.

Overview

Compact Hydraulic Asphalt Paver

The RP452L is a fully hydraulic, compact-type asphalt paver designed for high-performance road construction and maintenance. With a minimum working width of just 2 meters, it is an exceptionally flexible machine suitable for highways, city streets, and country roads. Equipped with rear 4WD technology and ergonomic controls, it ensures superior driving force, ease of operation, and high efficiency for professional surfacing projects.

Performance Specifications

Key Performance Metrics

2 m

Minimum Paving Width

Drive System	Full Hydraulic 4WD
