

Asphalt Softening Point Tester

This tester is designed for determining the softening point of asphalt. It features precise temperature control and measurement systems to ensure accurate and reliable results.

Product Overview

Precision Asphalt Testing

This Softening Point Tester is specifically engineered for the accurate determination of softening points in bitumen and coal tar bitumen. Designed for laboratory environments, it features precise temperature control and measurement systems to ensure reliable quality control results. The instrument is an essential tool for asphalt production facilities and research institutions requiring consistent testing performance.

Technical Specifications

Steel Ball Requirements

9.53 mm
Diameter

3.5 g
Weight

Heater Power	1000 W
Beaker Capacity	80 ml
Bracket Configuration	2 holes

Compliance & Standards

Supported Standards	GB/T4507, ASTM D36, IP58
---------------------	--------------------------
