

Assembly Line Forged Steel Clamping Component

This heavy-duty component is made from forged steel. It features a robust clamping mechanism with a cylindrical arm and integrated locking pin for secure attachment.

Product Overview

Industrial Clamping Solution

This heavy-duty forged steel component is engineered for demanding assembly line environments. It features a robust clamping mechanism with a cylindrical arm and an integrated locking pin for secure, repeatable positioning. Designed with a standard mounting hole, it provides reliable attachment for high-precision industrial production applications.

Technical Specifications

Construction

Heavy-Duty • Forged

Key Features

- Cylindrical arm mechanism
- Integrated locking pin
- Rectangular mounting body
- Standardized mounting hole

Material

Forged Steel

Application

Primary Application

Assembly Line, Industrial Production, Clamping
