

ASTM Standard Impact Test Flooring Medium

This flooring medium provides a standardized surface for conducting impact tests according to ASTM standards. It is designed to simulate potential damage from drops and impacts, ensuring reliable and consistent testing conditions.

Product Overview

Standardized Impact Testing Surface

This impact testing flooring medium is a specialized, standardized surface designed for rigorous safety testing protocols. It provides a consistent base onto which toys can be dropped from specified heights to simulate real-world impact scenarios, such as falls from cribs or tables. By using this medium, labs can accurately assess toys for potential hazards, including sharp edges, sharp points, and the release of small parts, ensuring compliance with international safety standards.

Technical Specifications

Dimensions	1/8 inch x 12 inches x 12 inches
Quantity per Set	9 pcs

Compliance & Standards

Testing Standard
ASTM F963 8.7.1
