

# Astronomical Refractor Telescope with Tripod

This refractor telescope is designed for observing distant objects, featuring a primary lens to gather and focus light. The F700 50 model has a 700mm focal length and a 50mm aperture, and it comes with a tripod and aiming scope.

## Product Overview

### Precision Optical Performance

This astronomical refractor telescope is an ideal instrument for amateur astronomers and hobbyists eager to explore celestial bodies and terrestrial landscapes. Engineered with a 50mm aperture and 600mm focal length, it delivers clear, magnified views of the night sky. The package includes a stable aluminum tripod and a finder scope to ensure easy target acquisition and steady observation.

## Optical Specifications

|                  |           |
|------------------|-----------|
| Focal Distance   | 600 mm    |
| Caliber/Aperture | 50 mm     |
| Corner Lens      | 90 degree |

## Accessories

### Included Eyepieces

- H8
- H20
