

Astronomical Telescope with Equatorial Mount

Optical telescope with tripod and equatorial mount is designed for astronomical observation. It features a primary lens for gathering light, a focusing mechanism, and an eyepiece for viewing magnified images.

Product Overview

Professional Observation Capability

This high-performance astronomical telescope is designed to provide clear, magnified views for both celestial and terrestrial observation. Equipped with a precision equatorial mount, it enables users to accurately track celestial objects as they traverse the sky. Its robust tripod and integrated focusing mechanism ensure stable, high-quality imaging for professional and hobbyist applications.

Technical Specifications

Hardware Features

- Primary light-gathering lens
- Precision focusing mechanism
- High-clarity eyepiece
- Stable support tripod

Mounting System	Equatorial Mount
Usage Applications	Astronomical Observation, Terrestrial Viewing
Celestial Tracking	Yes
