

Asynchronous Motor Powder Exhaust Fan

This high-efficiency powder exhaust fan is driven by a robust asynchronous motor. The unit is designed for industrial applications needing reliable air extraction, featuring optimized impeller design for maximum airflow and minimal energy consumption.

Product Overview

Industrial Air Extraction Solution

This high-efficiency powder exhaust fan is engineered with a robust asynchronous motor to provide reliable and consistent air extraction for demanding industrial environments. The unit features a durable construction paired with an optimized impeller design, ensuring maximum airflow while maintaining minimal energy consumption. It is specifically designed to handle particulate-laden air streams, making it an ideal choice for maintaining a clean, safe, and compliant working environment.

Technical Specifications

Safety Warnings

No Touch Warning • Industrial Grade

Motor Type	Asynchronous Motor
Application	Powder Exhaust, Industrial Air Extraction, Particulate Handling
