

Atmospheric Water Generator

This air water machine is a household electrical appliance categorized as a water dispenser. It extracts moisture from the air and converts it into potable water.

Product Overview

Sustainable Water Generation

The Atmospheric Water Generator DTYU45 is a sophisticated household appliance designed to extract moisture from the air and convert it into clean, potable drinking water. Engineered for indoor environments, this unit offers a sustainable and independent solution for accessing high-quality water. Its robust construction and user-friendly interface ensure reliable performance and ease of maintenance for daily use.

Technical Specifications

Device Category	Water Dispenser
Usage Environment	Indoor Use, Household, Residential

Key Features

Filtration Technology

- Multi-stage filtration system
- Integrated water storage tank
- User-friendly digital interface

Performance Highlights

45 DTYU

Model Capacity
