

Audio Alert and Announcement Device

Acoustic output device capable of producing sound for audio signals, announcements, or alerts. It appears to be a pair of interconnected speakers suitable for various audio applications.

Product Overview

Versatile Audio Alert and Announcement System

This audio output device is engineered for diverse professional sound applications, ranging from critical alert signaling to clear, effective public address announcements. The unit features an interconnected dual-speaker configuration designed to provide reliable acoustic performance. Whether deployed as a traditional buzzer or a robust loudspeaker, this device ensures high visibility and clarity in various industrial or commercial environments.

Technical Features

Usage Applications

- Emergency alert notification
- Voice announcement systems
- Industrial audio signaling

Operating Modes

Audio Signaling, Public Address, Alert Buzzer

Physical Architecture

Interconnected dual-speaker assembly
