

Audio Component with Metallic Ring

This audio component features a cylindrical housing with an open top. It incorporates a metallic ring around a gold-colored inner component with a three-pronged design.

Product Overview

Precision Audio Component

This specialized electronic component is engineered for seamless integration into sophisticated audio and sound systems. Featuring a durable cylindrical housing and a distinct metallic ring design, it is built to support high-performance signal transmission or sound projection. Its compact architecture makes it an ideal solution for manufacturers seeking reliable, high-quality audio elements for compact electronic devices.

Physical Characteristics

Housing Construction	Cylindrical plastic housing
Key Features	Metallic Ring, Gold-colored Inner Component, Three-pronged Design

Technical Specifications

Primary Applications

- Audio systems
- Sound projection devices
- Electronic sensor integration
