

Audio Loudspeaker with Conical Diaphragm

This loudspeaker is a transducer designed to convert electrical signals into audible sound. It incorporates a conical diaphragm suspended by a surround, allowing for precise movement and sound reproduction.

Product Overview

Professional Audio Transducer

This audio loudspeaker is designed to accurately convert electrical signals into high-fidelity sound. Featuring a durable conical diaphragm, it ensures consistent audio reproduction suitable for integration into various speaker enclosures. Its robust frame construction and standardized mounting configuration make it an ideal choice for professional audio assembly.
