

Audio Loudspeaker

This loudspeaker converts electrical signals into audible sound waves. It is constructed with a diaphragm, voice coil, and magnet assembly.

Product Overview

Professional Audio Loudspeaker

This high-quality loudspeaker is engineered to convert electrical signals into clear, accurate audio sound waves. Featuring a robust circular diaphragm and a precision-engineered voice coil and magnet assembly, it delivers reliable performance across diverse environments. Designed for durability and consistent output, this unit serves as a critical component for both high-fidelity home entertainment and professional sound reinforcement applications.

Technical Specifications

Design Components

- Circular diaphragm (cone)
- Voice coil assembly
- Permanent magnet motor
- Reinforced structural frame

Build Quality

Robust Construction • High Fidelity

Primary Applications

Home Entertainment, Professional Sound Reinforcement, Audio Systems
