

Audio Mixing Console for Food Processing Machinery

Professional audio mixing console designed for food, beverage, and cereal processing machinery applications. It features multiple input channels with gain control, equalization, and auxiliary sends, plus a master output section with level control and metering.

Overview

Industrial-Grade Audio Control

This professional audio mixing console is specifically engineered for integration with food, beverage, and cereal processing machinery. It provides precise control over audio signals through multiple input channels, featuring dedicated gain control and equalization. Built with a rugged construction, it is designed to withstand the demands of industrial processing environments while maintaining clear output metering and level control.

Technical Specifications

Output Section

- Master Output Level Control
- Integrated Metering

Input Channels

8 channels

Control Features

Gain Control, Equalization, Auxiliary Sends

Build Quality

Construction

Rugged • Industrial Grade

Designed For

Food, beverage, and cereal processing machinery
