

Audio Mixing Console with DSP Effects and LCD Display

This audio mixing console is designed for versatile sound control and signal processing. It features multiple input channels with individual gain, EQ, and pan controls, along with built-in DSP effects and a LCD display.

Overview

Professional Audio Mixing Console

This versatile mixing console is engineered for professional sound control in multipurpose halls, conference rooms, and live broadcast environments. Featuring 8 mono and 2 stereo input channels, it offers precise signal processing with high-precision 100mm faders and a dedicated SOLO monitoring system. The unit includes an integrated LCD display, 26 built-in digital effects, and reliable +48V phantom power for condenser microphones, ensuring high-quality audio performance for any sound-reinforcement system.
