

Audio Transducer

This component functions as a speaker. It converts electrical signals into audible sound waves.

Product Overview

Professional Audio Transducer Assembly

This audio transducer features a robust frame designed for high-performance sound reproduction. Built with a rigid structural housing, it provides the necessary support for magnet and voice coil assemblies to ensure long-term reliability. Its open-frame design facilitates optimal airflow, contributing to efficient thermal management and consistent acoustic output in demanding professional environments.

Technical Specifications

Design Features

- Circular mounting ring
- Open-back frame for air circulation
- Central magnet assembly support

Model ID	YD200-80
Frame Material	Stamped Steel, Cast Aluminum
