

Audio Transducer Component

This component functions as a speaker, trumpet, and buzzer. It is designed for creating sound or signaling in electronic devices.

Product Overview

High-Performance Audio Transducer

This audio transducer component is engineered for reliable sound production in electronic and audio-video applications. The unit features a robust square metal plate designed for seamless integration and durable mounting. With its central circular opening and optimized gasket seal, it provides consistent acoustic performance for signaling and audio output needs.

Physical Specifications

Mounting Configuration	4 holes
Form Factor	Square metal plate

Features

Applications	Speaker, Trumpet, Buzzer, Audio-Video
--------------	---------------------------------------

Construction

Sealing Method	Integrated black gasket sealant
