

Audio Transducer for Textile Machinery

This audio transducer is designed for apparel and textile machinery applications. It delivers clear and accurate sound reproduction, ensuring optimal performance in industrial environments.

Product Overview

Industrial Audio Integration

The SENZA audio transducer is a high-performance component specifically engineered for the rigorous demands of apparel and textile machinery. It delivers clear and accurate sound reproduction to ensure optimal communication and operational feedback within noisy industrial environments. With its durable construction and efficient power handling, this unit provides long-term reliability and seamless integration into existing textile equipment.

Technical Specifications

Performance Metrics

20000 Hz

Frequency Response Range

Construction Features

Industrial Grade, Durable Construction, Textile Machinery Compatible

Environment

Industrial apparel and textile manufacturing facilities
