

Audio-Video Broadcasting Component

Component designed for professional audio and video broadcasting applications. It provides a durable chassis with a front panel that includes a mesh grille and media slot.

Product Overview

Professional Broadcasting Excellence

This audio-video broadcasting component is engineered for high-performance transmission environments. Featuring a robust rectangular chassis with an integrated mesh ventilation system, the unit ensures optimal thermal regulation during continuous operation. It serves as a vital link in professional media infrastructure, providing stable and reliable performance for radio and television broadcast applications.

Technical Specifications

Chassis Design	Rectangular metallic housing with integrated front-panel mesh
Thermal Management	Yes
Front Interface	Card/Disc Slot, Mesh Grille

Application

Primary Application

Radio Broadcasting • Television Broadcasting • AV Infrastructure
