

Auto Steering and Transmission Component

This component is essential for the vehicle's steering and transmission systems. It ensures proper functionality of the steering and transmission mechanisms.

Product Overview

Specialized Chemical Component

This advanced chemical compound features a complex molecular structure incorporating phosphorus, oxygen, sulfur, and nitrogen atoms. The integration of an amino group attached to the phosphorus center suggests high reactivity and specialized functional utility. It serves as an essential base component for specific industrial applications requiring precise chemical synthesis.

Chemical Composition

Key Functional Groups

- Amino group (NH₂)
- Phosphorus-Oxygen double bond
- Phosphorus-Sulfur bond

Elemental Composition

Phosphorus (P), Oxygen (O), Sulfur (S), Nitrogen (N)

Chemical Class

Organophosphate/Thiophosphate derivative
