

Automated Animal Feed Production System

This complete feed production line is designed for efficient, automated animal feed production. It integrates machinery for grinding, mixing, pelletizing, and packaging.

Overview

Automated Animal Feed Production System

This complete pellet feed production line is designed for the efficient and automated manufacturing of animal feed. It incorporates advanced machinery for grinding, mixing, pelletizing, and packaging various feed ingredients to ensure consistent quality and nutritional value. The system is suitable for producing feed for livestock, poultry, and aquaculture, featuring robust construction and high throughput capabilities for large-scale operations.

System Capabilities

Production Stages

- Raw material cleaning
- Crushing
- Batching
- Mixing
- Pelletizing
- Cooling
- Screening & pellet crumbling
- Packaging

Automation Level

Automated System

Target Applications

Livestock, Poultry, Aquaculture
