

Automated Bottling and Packaging Line

This automated line integrates multiple processes. It includes bottling, filling, capping, sealing, labeling, coding, case sealing, bundling, and shrink film packing.

Product Overview

Automated Bottling and Packaging Line

This comprehensive automated solution streamlines the entire production process from initial bottling to final packaging. The integrated line features specialized stations for filling, capping, and induction sealing to ensure product integrity. Downstream processes include precise labeling, code printing, and secure case sealing, followed by bundling and shrink film packing for retail-ready distribution.

System Components

Included Modules

- Bottling machine
- Filling machine
- Capping machine
- Electromagnetic induction sealing machine
- Labeling machine
- Code printing machine
- Case sealing machine
- Bundling machine
- Shrink film packing machine
