

# Automated Bottling Machine

This automated bottling machine is designed for filling and capping bottles. It features stainless steel construction, enclosed safety panels, and a control panel for operation.

## Overview

### Automated Bottling Solution

This automated bottling machine is engineered for high-volume production environments, offering seamless filling and capping capabilities. Constructed from durable stainless steel, it ensures hygiene and longevity, making it an ideal choice for the beverage, food, and pharmaceutical industries. The integrated control panel and enclosed safety panels provide operators with precise control and a secure working environment.

## Technical Construction

Material Composition	Stainless Steel
Safety Features	Enclosed Safety Panels, Control Panel Operation

## Applications

**Industry Suitability**  
Beverage • Food • Pharmaceutical

## Operational Capabilities

**Primary Functions**

- Automated Filling
- Automated Capping

Production Scale	High-Volume
